JUNE KAVETE

Software Developer Intern (Full-Stack & Data) | Available immediately

Nairobi, Kenya | kavetejune@gmail.com | 0715 126 756

linkedin.com/in/junekavete | github.com/Junekavete82 | junekavete82.github.io

PROFESSIONAL SUMMARY

Final-year BBIT student and full-stack developer who designed, built and packaged SmartSave, a financial management platform for chamas and SACCOs (React, Node.js, Express.js, MySQL, REST APIs, Android via Capacitor) with M-Pesa integration and AI-based loan-eligibility and fraud-detection features. Works in Agile sprints across the full SDLC, from requirements and ERD design through testing and deployment, with SQL-first design, Git version control and clear documentation. Combines software delivery with a Google Data Analytics foundation to turn business requirements into working, measurable systems. Seeking a software development internship contributing to insurance, finance and enterprise systems. Available immediately.

TECHNICAL SKILLS

- **Languages:** JavaScript (ES6+), SQL, Python (Pandas, scikit-learn), HTML5, CSS3
- **Frameworks & platforms:** React, Node.js, Express.js, Capacitor (Android), REST APIs
- **Databases:** MySQL, PostgreSQL, relational schema design, normalisation, keys and constraints, CRUD
- **Practices:** Agile/Scrum, SDLC, requirements gathering, UML/ERD modelling, system testing, technical documentation
- **Tools:** Git, GitHub, Railway (deployment), Excel and pivot tables, BI dashboards
- **AI & data:** loan-eligibility scoring, fraud detection, Groq and Gemini APIs, LangChain, output validation, data cleaning, statistical analysis

PROJECTS

SmartSave: Financial Management Platform for Chamas and SACCOs | Final Year Project

- Replaced scattered chama records with a single system covering members, contributions, loans, repayments, transactions, notifications and reporting, by running the full SDLC end to end (requirements, ERD, build, testing, packaging).
- Automated loan-eligibility assessment and member credit scoring by building AI-based scoring on contribution and repayment history, giving admins consistent criteria instead of ad hoc judgement.
- Strengthened data integrity and fraud resistance by designing a normalised MySQL schema with enforced keys and adding AI-based fraud detection on transactions.
- Extended reach to mobile by preparing the React/Node.js web app for Android with Capacitor and for cloud deployment on Railway, so one codebase serves web and phone.
- Kept work organised and traceable by planning in Agile sprints, tracking every change in Git/GitHub, and documenting architecture, database design and usage for handover.

Data Analysis and Database Projects | Academic

- Turned business datasets into decision support by applying regression, correlation and hypothesis testing, and presenting findings to non-technical audiences.
- Improved data consistency by designing relational databases from business requirements with normalisation, keys and SQL, and testing queries against realistic sample data.
- Delivered working web applications from requirements through testing using HTML, CSS, JavaScript, React, Node.js and Express.js.

EXPERIENCE

Brand Ambassador, Smollan and Tradco | 2024 to 2025

- Made products easy to understand for members of the public in high-volume retail settings, by explaining them in plain language all day, a habit now applied to presenting technical and data findings to clients.

EDUCATION & CERTIFICATIONS

Bachelor of Business and Information Technology, Kiriri Women's University of Science and Technology | Exp. 2027
Certificate in Full Stack Software Development, Emobilis Technology Training Institute | 2023
Kenya Certificate of Secondary Education (KCSE), Ruchu Girls High School
Google Data Analytics Professional Certificate | **Google Digital Marketing & E-commerce Certificate**

ADDITIONAL

English and Swahili (fluent) | Kenyan national | Available immediately for an internship
